

...and in which sector you can think of.

It is all relying on the availability of business grade connectivity

The public Internet cannot deliver the reliability multi-site customers need, but managed IP services do

Recommendations for TiSA to create a global level playing field for business ICT services by removing regulatory asymmetry in telecoms:

- Inclusion of technology-neutral provisions and definitions for the application of bottleneck rules covering broadband - based on principles of equivalence
- Strengthening disciplines for transparent independent regulatory reviews
- Elimination of foreign equity caps in telecommunications
- Building telecoms rules on the General Agreement on Trade in Services and make them *GATS plus* and *TPP plus*
- Make TiSA the new global benchmark in digital trade, telecoms and ICT services / accession of other members and multi-lateralisation into the WTO system.

Bringing it all together
